

DRAWING & DESKTOP MEDIA

Clearprint 1000H® 16lb. Vellum is made of 100% cotton fiber. Clearprint retains its character, strength, printing quality and transparency under extended exposure to atmosphere, age, heat and light. Ink and pencil lines drawn, erased and redrawn will not leave ghosting or impair the surface for future reproductions of all types.

Clearprint Vellum provides an outstanding surface for pencil or ink. Sold in pads, packages and rolls.

CUSTOM PRINTED FORMATS

Custom Printed Title Blocks/Engineering Formats save expensive drafting time and presents a uniform, professional appearance, while instantly identifying your company name and logo. With camera-ready artwork, formats can be custom printed on almost any drafting film, vellum, bond or tracing paper. Cad-Clean powderless printing is available for custom printed plotter media to avoid plotter pen problems.

Custom Printed Appliques are available from your camera-ready artwork. Have the convenience of placing your logo, title block, bill of material, etc., wherever you want them.

Call for more details and current pricing.

PIN REGISTRATION PRODUCTS

Seven Pin Register Bar is a precision bar made of a stainless steel strip with seven beveled brass pins. This bar is used for holding and registering two or more sheets of film. Quality and accuracy are a "must" for this product.

IRGPINBAR **22.00**

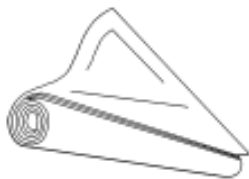

Precision Punching - all film can be 7-hole register punched for pin graphics applications. Precision punching is charged on a per sheet basis.

PUNCH **.40**

DRAWING & DESKTOP MEDIA

POLYESTER DRAFTING FILM

Herculene® Drafting Film has a base film and coating that are permanently transparent, waterproof and unaffected by aging. Herculene is superb for pencil drafting and ink work and has unequalled erasability. The film resists cracking, won't embrittle with heat used in reproduction and won't soak up moisture or grease from hands. The surface is far less abrasive than that of many other films, meaning that pen and pencil points last longer. Both pen and pencil "take" and hold superbly, yet erase without "ghosts". Available in both single or double matte. Available in packages and rolls.

DRAWING & DESKTOP MEDIA

DRAFTING APPLIQUE FILM

Rayven Adhesive Backed Reprofilm is a drafting applique product developed for the purpose of providing a time and money saving method of producing engineering and architectural drawings. Any repetitive detail such as title blocks, symbols or notes can be mechanically reproduced in quantity on reprofilm and applied with its adhesive backing to any drawing. The carefully controlled tooth surface receives and holds sharp, dense images leaving very little ghosting during the diazo process.

Series 300 Reprofilm has a translucent matte film on one side with a pressure sensitive adhesive backing on the other. Each type of reprofilm is specifically designed for different types of copiers or printing processes.

Series 400 Reprofilm has a clear polyester surface. Clear reprofilm offers the advantage of virtually non-ghosting in diazo reproduction. A reverse image can be applied to the smooth side of drafting film leaving the drawing surface free. Since it does not have a matte surface it will not accept pencil lines.

Type 300 and 400 have a polyester, anti-slip, anti-static release liner. The most dimensionally stable except in very hot copiers where distortion may occur.

Type 310 and 410 have a medium white paper release liner. For use in moderate temperature copiers.

Type 320 and 420 have a heavy tan paper release liner. Use this sheet in copiers where very high fuser temperatures will adversely affect the other products. This liner acts a heat sink and controls cockling and distortion.

Type 330 and 430 have a heavy white release liner. It is an excellent sheet for use in a typewriter and is designed to run on off-set and letterpress.

Type 360 is a new matte surface film. It has a non-curl liner with special anti-static treatment to keep it flat. 360 is easy to work with and won't jam, The non-ooze adhesive won't gum up your copier.

Matte Surface - 100 Sheet Box

Rayven 366 Reprofilm for Ink Jet Printers is a self-adhesive film coated to accept ink from ink jet printers. 8 ½ X 11. 50 Sheets per box.

RY1366	Matte	65.00
RY1466	Clear	65.00
RY1566	Paper	65.00

Tekra Ad-Heer is a designer grade pressure sensitive applique film used for mechanical reproduction of repetitive-type drawing details. The special thin polyester surface blends in with the original drawing and, being highly translucent, exhibits very little ghosting during diazo reproduction. The extremely fine matte texture is unusually receptive to pen, pencil and typewriter images. Slo-Set, a new acrylic adhesive system designed into Ad-Heer films, allows the user to position and reposition the applique on the drawing until it is in the proper place. Once in place, the adhesive will become stronger with time. Because it is acrylic, the Slo-Set adhesive will not yellow or fade with age.

Series 6000 Ad-Heer includes five types of applique film products having a fine matte texture that holds copier toners, and pen, pencil and typewriter images with excellent quality results.

Series 7000 Ad-Heer is comprised of five types of film with clear polyester surfaces. Clear films provide the added advantage of eliminating ghosting or shadowing.

Type 6000 and 7000 are the most versatile applique film offered since they can be reproduced in almost any of the plain paper copiers on the market. They have a 1.5 mil film laminated to a 3 mil printed polyester release liner with an anti-slip coating. Remains flat under any humidity condition and is not significantly affected by heat.

Type 6010 and 7010 are very thin products with a 53 lb. stabilized paper liner. These products are excellent for copier reproduction, especially when copiers are set up to run thin paper materials.

Type 6020 and 7020 are thicker products with a 78 lb. stabilized paper release liner. These products should be used in copiers where high fuser temperatures are involved and thicker film is needed to withstand the heat.

DAF Chartpak Drafting Applique Film is for applications such as title blocks, labeling, drawing corrections and other 'scissors drafting'. It is a 1.5 mil matte-finish polyester film. The matte surface gives top quality images whether using pencil, ink, a typewriter or office copier equipment. The film is ideal for diazo reproduction and will not yellow with age. The backing ensures smooth, even feeding through office copy equipment and it is slit so that the entire film surface can be used.

DAF has a permanent bonding adhesive. 8½ X 11. 100 Sheet Box.
